

Green Earth Infantry instructions

step 1

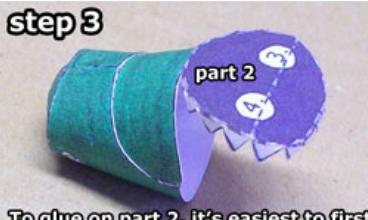

Print the parts on thicker paper and gather your papercraft tools, like a sharp knife, glue, a toothpick, a rubber cutting mat and any other tools you find useful. **p. 1/1**

step 2

Glue together part 1 as shown here.

step 3

To glue on part 2, it's easiest to first glue the backside to part 1...

step 4

...and then the bottom.

step 5

Assemble parts 3 and 4, and then glue them to the bottom of part 2 as indicated.

step 6

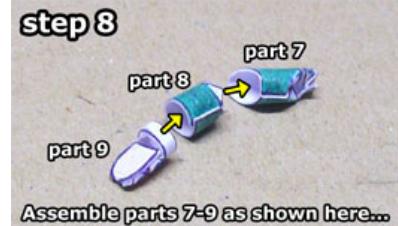

Assemble parts 5 and 6, and then glue them to the bottom of the legs.

step 7

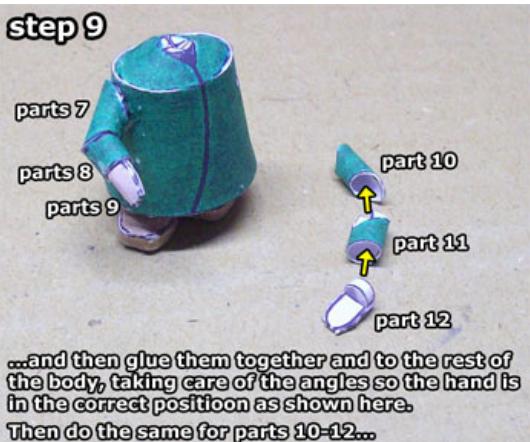

Instead of making the shoes point straight forward, have them pointing slightly to the side as shown here.

step 8

Assemble parts 7-9 as shown here...

step 9

...and then glue them together and to the rest of the body, taking care of the angles so the hand is in the correct position as shown here.
Then do the same for parts 10-12...

step 10

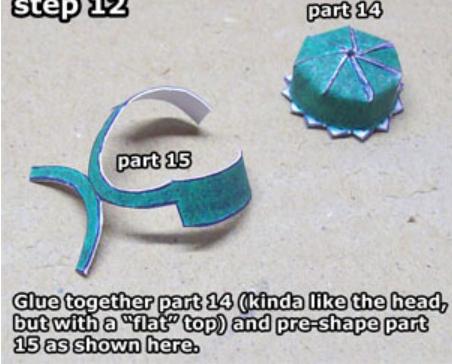

...gluing them to the other side of the body, again making sure the hand is in the right position as shown here.

Step 11

Take your time to cut out and assemble part 13 (I find it easiest to glue the "petals" together one by one, until the two ends meet).

Step 12

Glue together part 14 (kinda like the head, but with a "flat" top) and pre-shape part 15 as shown here.

Step 13

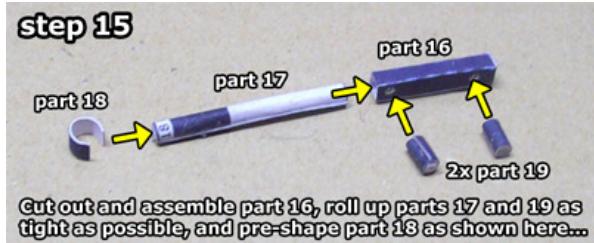

First glue the two flaps of part 15 around the bottom of part 14. Then fold and glue up the small visor at the front...

Step 14

...and then glue the head and helmet on top of the body as shown here.

Step 15

Cut out and assemble part 16, roll up parts 17 and 19 as tight as possible, and pre-shape part 18 as shown here...

Step 16

...and then glue all these parts together.

Step 17

Now place the Machine Gun in the hands of the Infantry soldier (you can use some glue of course if you want to).

Thank you for building a Ninjatoes' papercraft model!
